Energy Wave

CONFIDENTIAL — FORECAST — FOR DISCUSSION · COMPETITION ENTRY UNDER EVALUATION

What was submitted, and when. The company's first federal competition entry, stated as the record stands.

This page summarizes the company's entry in the U.S. Army's xTech Search 10 competition: who applied, what was submitted, and what the paper proposes. Submission is not an award and not a validation of any claim.

1 · THE ENTRY

Item	Record
Competition	U.S. Army xTech Search 10, Round 1 concept white paper. First-place prize $200,000 — a prize, not a grant or capital raised.
Submitted	9 October 2026, 07:33 UTC ("Submission Successful"); application reference 3b2a54ce-1bac-4a62-8331-ebfb6516b088. The competition closes 19 October 2026, 21:00 UTC.
Applicant of record	McLean Capital Development LLC (Wyoming), the founder's wholly owned company; EnergyWave is the project name. The company profile was corrected on 9 October to read exactly that.
Paper	"Independent Evaluation of Nanoscale Energy Conversion Claims for Army Sustainment" — three pages; technology readiness level 2, self-assessed. The corrected three-page paper, as approved by the founder on 9 October 2026, is placed in this folder.
Contacts	Primary: Ian Franklin McLean. Secondary: Chip Story, Co-Founder.
Profile facts as entered	Previous DoD business: No. Employees: 4. Outside debt or equity: $0 (founders excluded). Tags: Sensing; Engineering-Other; Power Generation and Management; Quantum Technologies; Computation; Data Visualization and Synthetic Environments. Mailing address: P.O. Box 8646, Newport Beach, CA 92658.

2 · WHAT THE PAPER PROPOSES

An independent measurement platform to evaluate nanoscale energy-conversion claims before they drive Army power-system investment. First candidate: a published metal–insulator–metal diode and Casimir-cavity experiment (Moddel et al. 2021, 1.4 pW maximum, attributed to its authors; Maclay 2024 critique), tested beside matched controls under pre-declared criteria with guarded electrical measurement, artifact tests and thermal bounds. A concept-stage evaluation capability, not a power-source offering; a null result is an expected, useful outcome. Independent laboratory execution and a qualified technical lead are planned and not secured. A possible six-month feasibility sequence is described, gated on people, access and quotes.

3 · FOR THE READER

- The entry was made by an existing Wyoming LLC that the founder wholly owns; EnergyWave, Inc. is being formed as the operating company and was not the applicant. Nothing in the entry is a statement about EnergyWave, Inc.'s eligibility.

- Entered values are the company’s own statements on the competition profile, not independent verification of the underlying facts.
- The paper proposes thread B of the research program — an independent, pre-registered evaluation of a published claim on the measurement platform — as an evaluation capability; it offers no power source and makes no device claim.

Basis: the competition portal record of 9 October 2026 and the founder-approved corrections of the same day; the submitted paper and its approved replacement, placed in this folder. Portal: usg.valideval.com.
