Energy Wave

The power supply for humanoid robots.

Capital Readiness — Research Venture

energywave.ai

CONFIDENTIAL — DRAFT — FOR DISCUSSION

ONE IMPORTANT TRUTH

“What important truth do very few people agree with you on?”

The last forty years compounded bits, not watts — and the inflection point to the physical-world future is energy density at the point of use.

Look around: the world software built is everywhere; the world it was supposed to power is not. EnergyWave exists to determine whether the next step in portable power is physically achievable — and to own the IP if it is.

The objective is not to prove a theory. It is to discover whether reality supports one.

T H E P R O B L E M

The energy layer never had its Moore's Law.

Information technology rode decades of exponential gains. The power that drives the physical world — motors, robots, vehicles — did not. The gap between the two curves is the opportunity.

~10^6×+

Growth in compute per dollar since 1990

~3–4×

Improvement in portable energy density over the same period

Directional, not to scale — orders of magnitude illustrate the divergence.

THE CAPABILITY

A humanoid is a power problem.

To sense and move like a person, a humanoid must run human-grade systems at once — not a few proximity sensors and a battery clock.

Sight & sound

Cameras and microphones.

Smell & taste

Gas-sensor and electrochemical arrays — electronic nose and tongue.

Touch

Tactile arrays and electronic skin, at nerve-level granularity.

Motion

Dense actuators, at muscle-level granularity.

Run simultaneously, that load exceeds what a lithium battery delivers. **EnergyWave builds the power supply for it. Nothing else.**

F I R S T R E S E A R C H M O D U L E

Under test: Floyd “Sparky” Sweet’s solid-state design.

The vacuum triode amplifier (VTA) is the venture’s first named research module — a specific, testable starting hypothesis rather than a broad claim.

Characterize

Reproduce and instrument the claimed mechanism under controlled conditions.

Test

Subject it to the energy-conservation filter: net source, colder sink.

Decide

Extract the real physics and file IP — or retire it publicly. Either outcome has value.

A disciplined test wins either way: if the physics is real, we own it; if not, we’ve demonstrated the discernment that makes the rest of the program credible.

S C I E N T I F I C H O N E S T Y

We do not conflate real science with over-unity claims.

Legitimate adjacent science

- Casimir effect
- Lamb shift
- Metamaterials & nanofabrication
- Ion-wind / field propulsion

The contested leap

Continuous net energy extraction from the vacuum is physically unsupported. The rigorous reviews are explicit: cyclic extraction of this kind would violate the second law of thermodynamics. Kilowatt figures in the literature are unbuilt, theoretical estimates — not demonstrated devices.

The line between the two is exactly where the company does its work.

THE EDGE

Avoiding the free-energy graveyard.

A century of this field is littered with frauds and self-deception. We reject far more than we pursue. Every claim and every document passes through a single filter:

> **What is the net energy source — and where is the colder sink?** If a claim can't answer that, it gets sorted out.

This is why credible reviewers attach explicit caveat-emptor warnings to the free-energy literature — and why disciplined diligence, not enthusiasm, is the asset here. Substantive physics questions go to our technical principals, not to a pitch deck.

S T R U C T U R E & S A F E T Y

Two arms. One product. Built safely.

EnergyWave, Inc.

Delaware C-corp — operating company

Develops the power supply for humanoid robots. Nothing else.

501(c)(3), in formation

Policy & responsible-development arm

Makes the safety and competitiveness case to government; engages on technology-transfer policy.

Safety is a design requirement. The unit is scoped to humanoid robots only — not to disrupt the auto industry — keyed to its platform like a cartridge, and self-disables into an inert form if tampered with.

Structured to pursue strategic investment from In-Q-Tel.

THE PATH

A staged path — research first, claims last.

0

PHASE 0

This round

Form both entities, secure IP, and complete the technical review + power budget.

1

PHASE 1

Prototype

Build toward the spec against the energy-conservation test. Honest go / no-go.

2

PHASE 2

Power unit

The power supply that runs a humanoid — the product.

3

PHASE 3

Scale

Broader applications of the capability — released responsibly, on our terms.

T H E A S K

A 3-month bridge to capital readiness.

A SAFE that stands up both entities, secures the IP position, and funds the founder full-time — so EnergyWave can get to work on the power supply for humanoid robots. Not a seed round.

$60,000

SAFE · capital readiness

3-month runway

U S E O F F U N D S

Where the bridge goes — and what it delivers.

$4,000

Entity & legal

C-corp + 501(c)(3) setup.

$25,000

IP / patent retainer

K&L Gates — provisional filings.

$24,000

Founder runway

3 months, full-time.

$7,000

Reserve & travel

Investor & advisor meetings.

3-Month Objectives:

- Form both entities
- Establish IP strategy
- Review the Sweet module
- Define go / no-go criteria

Total: $60,000 — estimated allocation; confirm IP retainer and founder runway with counsel.

T E A M & C O U N S E L

Built to be checked, not just believed.

Ian McLean Founder & CEO

Founded Statpedia (Reddit front page; hundreds of thousands of users); FDIC (2008 crisis); M.S. CS, UC Irvine (quantum coursework); Wolfram Research; Avnet venture tech — early Anduril, Wrap (NASDAQ: WRAP). DoD white paper author; NDA consulting, U.S. intelligence org.

Kenneth “Chip” Story Co-Founder

Physicist. B.S. geological engineering (South Dakota School of Mines); M.S. geophysics (Colorado School of Mines); 50+ years in energy exploration — published researcher. Director & R&T Team Leader, Zero Point Energy Project Group (80 technical minds, five project subsets).

Jack Sarfatti Physics advisor

Theoretical physicist. B.A. physics, Cornell — studied under Hans Bethe, Nobel laureate and head of theory for the Manhattan Project; Ph.D. physics, UC Riverside. Research fellow at Birkbeck College London with David Bohm, and ICTP Trieste with Abdus Salam. Leading member of the Fundamental Fysiks Group, credited in the lineage of quantum information science.

Alan Crunkleton Technical & financial advisor

MIT Ph.D. (mech. eng.); spun MIT research into a cryogenics company for MRI and superconducting electronics — CEO eight years, through acquisition. M.D., UMass. Partner, Hardesty, LLC; 35+ years, concept to commercialization.

K&L Gates LLP Patent counsel

Brian Novak, Ph.D. — Partner in Charge, Irvine. Dennis Majewski — Partner; EE/CE adv. degree; former senior electrical design engineer (semiconductors, quantum circuits, micro sensors).

Energy Wave

Fund the next three months.
