Energy Wave

CONFIDENTIAL — FORECAST — FOR DISCUSSION · PROJECTED SIZING FROM THE FORECAST MODEL · NO SAFE EXECUTED, NO OUTSIDE FUNDING RAISED

# Seed Round — the round the bridge is built to reach. Capital follows evidence.

EnergyWave is an early-stage research venture building the power supply for humanoid robots — and first finding out, to a published standard, whether any non-chemical approach can beat the lithium cell a humanoid already carries. The seed round funds that program to its first decision, and pays for the next decision only if the first says go.

- **The problem.** Compute per dollar grew ~$10^6$× since 1990; portable energy density ~3–4×. Whether a humanoid running human-grade sensing and dense actuation at once exceeds what a lithium pack delivers is the question the power-budget specification quantifies for a defined platform; the industry's answer to endurance today is swap packs and docks. *Directional; attributed figures.*
- **The work.** Three threads — the founder's solid-state module (A, the lead path since 15 October 2026), an independent replication of Moddel et al. 2021 (B), the artifact-exclusion measurement platform (C) — under one gate protocol. Mainstream prior: no. Published either way.
- **The discipline.** Pre-registered protocols; replication contracted before each gate; a planned advisory board with a declared critic and a veto over performance statements; no number before Gate-3 third-party validation.

## WHAT THE SEED FUNDS

| Tranche | Gate it funds | Released on |
|---|---|---|
| **A** · at close | Gate 1 — characterize: bench commissioned, error budget published; replication run blinded; founder's module under the same protocol; PI hired as a condition. | Close. projected $7.0M |
| **B** · escrowed | Gate 2 — conservation test; second-laboratory replication contracted in advance. | Gate-1 report, board certification, publication |
| **C** · escrowed | Gate 3 — extract or retire; third-party validation; paperweight test. | Gate-2 report, certification, publication |

Unspent escrow is returned on a kill. Investors receive the same gate reports the public does.

## THE FORECAST MODEL'S CLOCK AND NEED — V1.2, BASE SCENARIO, PROJECTED

| Gate | Month | Cumulative need |
|---|---|---|
| Gate 1 — characterize | 9 | $6,987,330 |
| Gate 2 — conservation test | 21 | $13,719,010 |
| Gate 3 — extract or retire | 36 | $22,143,610 |

Forecast model v1.2 (16 October 2026), Base scenario: $18,453,008 plan + 20 % reserve = **$22,143,610 projected** over 36 months. Inputs are forecast assumptions to be validated by finance; projections, not commitments.

## THE INSTRUMENT

| Term | Value |
|---|---|
| Amount | projected $22.1M over 36 months, in three gate tranches |
| Instrument · pre-money | set with counsel |
| Tranches | A at close; B and C in escrow from the close (proposed) |
| Issuer | EnergyWave, Inc. (Delaware) — formation in progress with K&L Gates LLP |
| Exemption | 506(b) / 506(c) as counsel determines |
| Strategic path | Structured to pursue strategic investment from In-Q-Tel (intent) |

## TEAM

Current core team: Ian McLean, Founder & CEO · Chip Story, Co-Founder, physicist. Team members: Jack Sarfatti, theoretical physicist; Mike Wentz (role to be announced). Advisor: Alan Crunkleton, technical & financial advisor. Planned from the Seed Round: Arath Acosta, Design Engineer. K&L Gates LLP, patent counsel. Details in *Team and Counsel*.

## STRUCTURE & SAFETY

EnergyWave, Inc. is the operating company (Delaware; formation in progress with K&L Gates LLP); GovThink a proposed, separate 501(c)(3) policy arm (not yet filed; no formal tie). Proposed design requirements for any future unit — scoped to humanoid robots only, keyed to its platform like a cartridge, designed to self-disable if tampered with — are tested at Gate 3. **Capital raised:** no outside debt or equity, no SAFE executed, no outside funding raised (15 Oct 2026); the October competition entry recorded ≈ $10,000 including founder contributions. Planned office: Irvine, near UC Irvine and the NFCRC (lease to be negotiated).
