Energy Wave

CONFIDENTIAL — FORECAST — FOR DISCUSSION · PROJECTED SIZING FROM THE FORECAST MODEL · NO SAFE EXECUTED, NO OUTSIDE FUNDING RAISED

The round the bridge is built to reach. Capital follows evidence.

Objective #3 of the capital-readiness bridge is “define measurable go / no-go criteria and prepare the next round.” This page is the structure of that round as the program documents describe it. The amount, the pre-money and the instrument are set with counsel; the projected sizing below is the forecast model’s (v1.2, Base scenario), on assumptions to be validated by finance.

WHAT THE SEED FUNDS

Period	Work	Decision at the end
Tranche A released at close	Gate 1 — Characterize. Commission the artifact-exclusion bench and publish its error budget (thread C); run the pre-registered replication of the strongest published claim (thread B); characterize the founder’s solid-state module — the lead research path since 15 October 2026 — under exactly the same protocol (thread A). Hire the principal investigator — a condition of Tranche A, not an aspiration.	Gate-1 report, advisory-board certification, publication → Tranche B, or wind-down with unspent escrow returned.
Tranche B escrowed	Gate 2 — Conservation test. Closed-system calorimetry; mechanism discrimination against known-source models; independent replication at a second laboratory contracted before Gate 2 begins.	Gate-2 report → Tranche C, or the effect is retired publicly.
Tranche C escrowed	Gate 3 — Extract or retire. Engineering characterization, lifetime and stability, third-party validation; the anti-tamper paperweight test.	First public performance disclosure, or the program ends having answered the question.

> Tranches B and C are proposed to sit in escrow from the close — a structure not yet agreed; agent, agreement and bank are confirmed directly before close — released only on a written gate report, advisory-board certification and publication of the gate results. Investors receive the same report the public does. This converts “too early for us” — the objection the company has already heard from one fund — into a staged option: an investor underwrites Tranche A and a decision, not a three-year belief.

WHAT THE FORECAST MODEL PROJECTS — AND WHAT IT DOES NOT

Figure	Projected value	Basis
36-month plan, Base scenario	$18,453,008 plan spend · $22,143,610 raise including the 20 % reserve	Forecast model v1.2 (16 October 2026), Base scenario. Lean $15,821,567 / $18,985,880; Full $22,303,608 / $26,764,330.
Gate months	Gate 1 month 9 · Gate 2 month 21 · Gate 3 month 36	Model assumptions; plan start 1 January 2027.

EnergyWave, Inc. (a Delaware corporation, in formation) · 16 October 2026 · EnergyWave Final · Early-stage research venture. Projections are forecasts on stated assumptions, not commitments; forward-looking statements are not proven capabilities or guarantees. For discussion only; not an offer to sell, or a solicitation of an offer to buy, securities.

Figure	Projected value	Basis
Projected cumulative need at the gates (Base)	$6,987,330 · $13,719,010 · $22,143,610	Tranche A ≈ $7.0M at close; B ≈ $6.7M and C ≈ $8.4M escrowed — projected sizes, set with counsel at close.
Largest single assumptions	Two theoretical-physicist consulting agreements at $500k per year each; the co-founder at $500,000 W-2	Forecast assumptions to be validated by finance; if the consulting figure is $500k in total, every headline number falls.

SET BEFORE CLOSE

- Amount, pre-money and instrument — set with counsel; the forecast model's projection is the starting point.
- Every forecast assumption validated by finance: founder salary, engineer bases, rent, build-out, instrumentation package, precision additive-manufacturing system, insurance, recruiting; the $500k-each question.
- Escrow: agreement, agent and bank confirmed directly, release conditions, no fee to release — a proposed mechanism, finalized with counsel.
- Securities exemption (506(b) or 506(c)) determined by counsel before any general solicitation.
- Entity formed (in progress with K&L Gates LLP); IP assigned in; team and advisor agreements signed; the principal investigator identified.
- Planned office: Irvine, near UC Irvine and the National Fuel Cell Research Center — site and lease to be negotiated.

Basis: the September 2026 investor overview and program summary; the forecast model v1.2 (16 October 2026); the decisions of 15 October 2026.
