CONFIDENTIAL — FORECAST — FOR DISCUSSION · AN OUTLINE, NOT AN OFFERING

Series A is a Gate-3 event. What exists for it today, and what does not.

In the program's own design a priced Series A follows Gate 3: independently validated, repeatable performance under third-party observation, and the first number EnergyWave would ever state. The forecast model's 36-month horizon ends there. This outline lists what a Series A diligence reader will expect to find, what exists today, and what the program must produce before that round.

1 · WHERE SERIES A SITS IN THE LADDER

Round	Reached when	Materials
Capital Readiness	Now — close friends, family and angel groups. The October materials proposed a $60,000 SAFE for three months; no SAFE has been executed and no outside funding raised; the current amount and instrument are set with counsel at close. May combine with the Seed Round.	Deck, one-pager, Terms and Objectives, indicative SAFE terms.
Seed	At capital readiness — entity formed, IP position filed, first module reviewed, criteria written. Example audience: Conviction (a target, not a relationship).	Structure, deck, one-pager and Technical Docs; projected sizing $22.1M over 36 months from the forecast model.
Series A	After Gate 3 — third-party validation and the first performance disclosure. Example audience: groups such as Sequoia Capital (a target, not a relationship).	This outline; the forecast model and its reading note. The cap table and a Series A deck are produced as the inputs arrive.

The audience examples name the kind of audience intended; none is a relationship, endorsement, invitation, commitment or confirmed opportunity, and no Series A amount, deck or cap table follows from naming one.

2 · WHAT THE FORECAST MODEL PROJECTS — V1.2, 16 OCTOBER 2026

Figure	Projected value (Base scenario)	Basis
36-month plan spend	$18,453,008	Forecast model v1.2 (16 October 2026), recalculated in full: the September model updated with the co-founder at $500,000 W-2 from month 1, in addition to the two theoretical-physicist consulting agreements at $500k per year each; every other input a forecast assumption to be validated by finance. Lean $15,821,567 / $18,985,880; Full $22,303,608 / $26,764,330. Projections, not commitments.
Raise including 20 % reserve	$22,143,610	
Cumulative need at Gate 1 · Gate 2 · Gate 3 (months 9 · 21 · 36)	$6,987,330 · $13,719,010 · $22,143,610	
Headcount in the plan	18 roles modeled, five of them applied physicists	
Cap table (September 2026 planning)	Founder ≈ 29.5 % fully diluted after Series A	September planning figure on forecast assumptions; the cap table is rebuilt from the formation documents.

3 · READINESS CHECKLIST

Item a Series A reader expects	Today	What closes it
Gate 1, 2 and 3 reports, certified and published	Not yet	The research program; years away by the model's own timeline.
Third-party validation of a repeatable result	Not yet	Gate 3 deliverable.
Cap table	Planned	Rebuilt from the formation documents and the forecast model, every ownership figure labelled a projection until the formation documents exist.
Series A deck	Planned	Built in the October visual system after Gate 2 has said what the effect is.
Forecast model with validated inputs	In progress	Every assumption validated by finance: founder salary, engineer bases, rent, build-out, instrumentation, additive-manufacturing system, insurance, recruiting; the consulting-agreement and co-founder figures.
Historical financial statements	Not yet	None exist for an entity in formation; McLean Capital Development LLC's records as the pre-formation vehicle.
IP assigned to EnergyWave, Inc.	Planned at formation	Counsel's assignment of the domain and know-how; a filed application in the inventors' names assigned to the company.
Board, advisory board, 409A, option plan	Planned	With counsel; the external scientific advisory board with a declared critic.
Data-room index	In progress	The forecast model's data-room checklist (37 items) and these materials.

4 · WHAT THIS FOLDER WILL HOLD WHEN THE INPUTS ARRIVE

The cap table, or a rebuilt one from the model, with every ownership figure labelled a projection until formation documents exist.

A Series A deck in the Oct-13 visual system, built only after Gate 2 has said what the effect is — the prospectus' own rule for Gate 3 content.

The validated raise model and a dated financial-status note replacing the 18 Sept 2026 one.

Basis: the forecast model v1.2 (16 October 2026) and its September 2026 ancestor; the financial status note of 18 September 2026; the Technical Prospectus v1 §§7.2, 9; the September investor overview; the decisions of 15 October 2026.
