Energy Wave

CONFIDENTIAL — DRAFT — FOR DISCUSSION

Dollars tied to milestones, not an open-ended ask. A reading note for the workbook.

The workbook in this folder is a 36-month, driver-based cash-need plan for EnergyWave, Inc. only. It computes a raise size from the plan — headcount, laboratory, equipment, G&A and reserve — and tranches it by the three research gates. It contains no device performance claims and no technical specifications.

THE FILE

Item	Value
Workbook in this folder	**EnergyWave_Raise_Model_v1.1-corrected_2026-10-15.xlsx**
Ancestry	EnergyWave_Raise_Model_v1.xlsx, 7 Sept 2026, 149,053 bytes, SHA-256 a91260689894fda26906a9f763a230b3504ffe3549b6e8cbc94a17028f5831ab (unchanged on the founder's Mac).
The one change	Roster!A4 — a nickname in parentheses after the founder's name was removed; the cell now reads "Ian F. McLean". The edit was made to the workbook's shared-strings part only; no formula was touched or recalculated and every other byte of every other part is identical to v1. The corrected file passes the package's forbidden-label scan.
Why not "v2"	A different historical v2 (11 Sept 2026) is referenced by the September manifest and has not been located; this corrected copy keeps v1's lineage in its name.
Derivative — v1.2 (16 Oct 2026)	**EnergyWave_Raise_Model_v1.2_2026-10-16.xlsx** — a dated derivative of v1.1-corrected, which stays untouched. Three changes only: Headcount!H02 (Kenneth "Chip" Story) carries the founder's direction of 16 Oct 2026 (S-55, S-57) — role label Co-Founder / Physicist (his designation of 15 Oct), 1099 → W-2, $150,000 → $500,000, payroll load applied, input status "From Ian (16 Oct 2026; interpretation flagged)"; a note row (Headcount!B27) records Mike Wentz as a team member by the founder's direction with title, type, base and start not modeled and no figure entered; a change record is appended to the README sheet. Every formula was recalculated in LibreOffice Calc (headless) and the results are stored; the saved scenario is Base, as in v1; the model checks UseOfFunds!C38:C40 read 0 after recalculation. 150,427 bytes; SHA-256 in MANIFEST.md.
Sheets	README · Assumptions · Headcount · CostLines · Monthly · UseOfFunds · Pivot_Data · Entities · Roster · DD_Checklist
Conventions	Blue = input; black = formula; green = cross-sheet link; yellow = key lever. Every dollar input carries a status: From Ian / Placeholder / Formula. Scenario lever Assumptions!B4 (1 Lean · 2 Base · 3 Full).

HEADLINE OUTPUTS — MODEL OUTPUTS ON PLACEHOLDER INPUTS, NOT A RAISE FIGURE

Scenario	36-month plan	Raise incl. 20% reserve	Origin
Lean	$14.44M	$17.33M	Financial status note of 18 Sept 2026, derived from workbook v1. Placeholder inputs throughout; the two theoretical-physicist consulting agreements are modelled at $500k/yr *each* and may be $500k total.
Base	$17.07M	$20.49M	
Full	$20.92M	$25.11M	
v2 (11 Sept 2026, not located)	—	$19.68M base · $23.40M with full engineering band	Same note; the v2 file is not in the package.
v1.2 Base (16 Oct 2026)	$18.45M	$22.14M	The recalculated derivative — the founder's direction on Chip Story's row applied, every other input the same placeholder. Lean and Full are not restated here (the saved scenario is Base).

The workbook retains v1's stored calculation results (saved scenario: Base). The name-only correction did not recalculate the model and no recalculation was performed for this package; the saved Base results in UseOfFunds!C4 and C6 agree with the Base row above. Validate the assumptions and recalculate in the intended spreadsheet application before relying on any output. The saved Base-scenario checks in UseOfFunds!C38:C40 read 0 — a stored state, not a fresh calculation test. The v1.2 derivative, by contrast, was recalculated in full, and its checks read 0 after that recalculation.

> **Dated status note — 15 October 2026.** The pinned workbook is preserved unchanged: no numeric input or formula is edited, and no text is inserted into a numeric cell. Four of its stored assumptions now conflict with the founder's statements of 15 Oct 2026 (ledger S-44) and are recorded here as dated conflicts: (1) DD_Checklist!E10 marks prior SAFEs "Have" and Headcount!P4 says a pre-seed SAFE covered runway — the founder confirms no SAFE has been executed and no funding raised; (2) Roster!A4:H8 carries the September roles — the current core team is Ian McLean and Chip Story, with Jack Sarfatti and Mike Wentz as team members (Mike's title **[TBD]**, founder's direction 16 Oct 2026) and Arath Acosta a proposed Design Engineer from Seed; (3) CostLines!B4 / R4 / B15, Assumptions!A14:C17 and DD_Checklist!C36:F36 carry facility assumptions — the planned office is in the UCI area near the National Fuel Cell Research Center, a founder plan — no lease, facility access, sponsored research, partnership, endorsement or institutional agreement is established in the reviewed evidence, and the plan implies none; (4) every stored scenario output remains a historical placeholder, not an approved budget or a raise target. Any correction is made in a separately versioned derivative, never in this file.

Dated status note — 16 October 2026 (v1.2). The founder asked why Chip Story's row carried $150,000 as 1099 rather than $500,000 W-2 and then directed that the Series A be updated accordingly (S-55, S-57). The derivative applies it: H02 at $500,000 W-2 with the 22 % placeholder payroll load, from month 1 in every scenario, as v1 had it. Interpretation stated, not decided: his $500,000 is modeled in addition to the two unnamed $500,000 theoretical-physicist consulting agreements (H08–H09) — **[TBD] — Chip Story's agreement: one of the two $500k physicist agreements, or additional to them**; **[TBD] — Chip Story's time commitment and cash / equity split**. Effect in the Base scenario: plan spend $17,073,008 → **$18,453,008**; raise including the 20 % reserve $20,487,610 → **$22,143,610**; cumulative need at the gate months 9 / 21 / 36: **$6,987,330 / $13,719,010 / $22,143,610**; payroll $8,735,508 and consulting $3,096,667 over 36 months; monthly burn at the snapshot months 6 / 12 / 24 / 36: $462,200 / $468,033 / $468,033 / $468,033. Model outputs on placeholder inputs, as before — not validated, not raise figures. Mike Wentz is noted on the Headcount sheet and not modeled: **[TBD] — Mike Wentz — title, engagement type, base and start month in the model**; no figure is invented for him.

STRUCTURE A DILIGENCE READER WILL LOOK FOR

Sheet	What it establishes
Headcount	Eighteen roles (v1.2: Chip Story's row at $500,000 W-2; Mike Wentz noted, not modeled) with base, load, relocation, equity note and start month by scenario — five applied physicists, two theoretical-physicist consulting agreements, EHS officer first, test and instrumentation engineers, additive-manufacturing and software engineers, operations. The PI-equivalent hires precede any bench work.
UseOfFunds	Raise sizing; category × year table; cumulative need at each gate month (the tranche table); one-time vs recurring split; people on plan.
Entities	Funds-flow map for EnergyWave, Inc., GovThink Institute, a second proposed nonprofit, a Wyoming pooling vehicle, McLean Companies LLC and the escrow counterparty — with the control that must exist for each.
Roster	Team, advisors, counsel and proposed vendors, each with the bio claim that must be verified before it enters any packet.
DD_Checklist	A 37-item data-room index with owner and status — Have / In progress / Need / Blocked.

SERIES A — WHAT EXISTS AND WHAT DOES NOT

The September materials contemplate a Series A after Gate 3, with a cap table (v1.1 DRAFT, 11 Sept 2026) showing the founder at roughly 29.5% fully diluted after that round on placeholder inputs. Neither the cap table nor the 13-slide deck of the same date has been located in the inventory; both are referenced by the September manifest. This folder holds the corrected workbook and this note until they are found or rebuilt. OPEN
