Energy Wave

energywave.ai • Seed Round — one-page summary (amount and terms open)
15 October 2026 · DD-2026-10-15-r5-draft

CONFIDENTIAL — DRAFT — FOR DISCUSSION · AMOUNT AND TERMS NOT SET — EVERY OPEN ITEM IS TAGGED

Seed Round — the round the bridge is built to reach. Capital follows evidence.

EnergyWave is an early-stage research venture building the power supply for humanoid robots — and first finding out, to a published standard, whether any non-chemical approach can beat the lithium cell a humanoid already carries. The seed round funds that program to its first decision, and pays for the next decision only if the first says go.

- **The problem.** Compute per dollar grew ~10^6× since 1990; portable energy density ~3–4×. A humanoid running human-grade sensing and dense actuation at once exceeds what a lithium battery delivers; the industry answers with swap packs and docks. *Directional; attributed figures.*
- **The work.** Three threads — the founder's solid-state module (A), an independent replication of Moddel et al. 2021 (B), the artifact-exclusion measurement platform (C) — under one gate protocol. Mainstream prior: no. Published either way.
- **The discipline.** Pre-registered protocols; replication contracted before each gate; an advisory board with a declared critic and a veto over performance statements; no number before Gate-3 third-party validation.

WHAT THE SEED FUNDS

Tranche	Gate it funds	Released on
A · at close	Gate 1 — characterize: bench commissioned, error budget published; replication run blinded; founder's module under the same protocol; PI hired as a condition.	Close. **[Needs Input from Ian or Chip: Tranche A amount]**
B · escrowed	Gate 2 — conservation test; second-laboratory replication contracted in advance.	Gate-1 report, board certification, publication
C · escrowed	Gate 3 — extract or retire; third-party validation; paperweight test.	Gate-2 report, certification, publication

Unspent escrow is returned on a kill. Investors receive the same gate reports the public does.

THE MODEL'S CLOCK AND NEED — STORED VALUES, PLACEHOLDER INPUTS

Gate	Month	Cumulative need
Gate 1 — characterize	9	$6,573,330
Gate 2 — conservation test	21	$12,753,010
Gate 3 — extract or retire	36	$20,487,610

Raise Model v1.1-corrected, saved Base scenario ($17,073,008 plan + 20 % reserve): **model outputs on placeholder inputs** — not validated, not raise figures; two theoretical-physicist agreements modelled at $500k/yr each may be $500k in total.

THE INSTRUMENT

Term	Value
Amount	**[Needs Input from Ian or Chip: seed amount]**
Instrument · pre-money	**[Needs Input from Ian or Chip: priced equity or SAFE; pre-money]**
Tranches	A at close; B and C in escrow from the close
Issuer	EnergyWave, Inc. (Delaware) — formation status open (D3)
Exemption	506(b) / 506(c) **[Needs Input from counsel via Ian]**
Strategic path	Structured to pursue strategic investment from In-Q-Tel (intent)

TEAM

Ian McLean, Founder & CEO · Chip Story, Co-Founder · Jack Sarfatti, Physics advisor · Alan Crunkleton, Technical & financial advisor · K&L Gates LLP, patent counsel. Verification status of every credential in *Team and Counsel*; written consents not yet on file. **[Needs Input from Ian or Chip: consents — D4]**

STRUCTURE & SAFETY

EnergyWave, Inc. (operating company) and a 501(c)(3) policy arm in formation. The unit is scoped to humanoid robots only, keyed to its platform like a cartridge, and self-disables into an inert form if tampered with. **Capital raised to date:** ≈ $10,000 incl. founder contributions; no outside debt or equity (founder's statement, 9 Oct 2026).

Ian McLean · EnergyWave, Inc. · **[Needs Input from Ian or Chip: confirm ian@energywave.ai — D5]** · 949-280-0936 · energywave.ai
